Questions

1. Import dataset

The screenshot shows the Microsoft Excel interface. The formula bar displays the formula: `=Table.TransformColumnTypes(#Promoted Headers",{{"Order ID ", Int64.Type}, {"Product ", type text}, {"Category ", type text}, {"State ", type text}, {"Sales ", type text}, {"Cost ", type text}, {"Quantity ", type text}}`. Below the formula bar, a table is displayed with 10 rows and 7 columns: Order ID, Product, Category, State, Sales, Cost, and Quantity. The data is as follows:

	Order ID	Product	Category	State	Sales	Cost	Quantity
1	101	Laptop	Electronics	Delhi	50000	42000	
2	102	Phone	Electronics	Mumbai	20000	15000	
3	103	Chair	Furniture	Delhi	8000	5000
